## SUMMARY

Backend engineer building NestJS, PostgreSQL, Redis and BullMQ systems that stay correct under retries, flaky networks and multiple instances. Built a trade-promotion microservice from scratch for a nationwide sales-force automation platform; strongest in transactional design, idempotency, concurrency across pods and cache invalidation.

## EXPERIENCE

**Software Engineer** — Riseup Labs — Dhaka, Bangladesh · Jan 2026 – Present

*Augmented to Neoscoder (Akij Venture Group): backend of an FMCG route-to-market / sales-force automation platform on NestJS, Fastify, PostgreSQL, Drizzle, Redis and BullMQ, deployed across multiple pods.*

- Designed and built a NestJS trade-promotion microservice from scratch as primary author (schema, APIs, caching, queues, Excel import), serving an offline-first catalogue to the field sales app.
- Built a Redis-versioned catalogue cache bumped only after commit, so slow rebuilds can't overwrite newer data; falls back to Postgres if Redis fails, and clients poll a version endpoint to skip refetches.
- Fixed a trip-number race across Kubernetes pods with transaction-scoped Postgres advisory locks, and made memo locking a single atomic conditional update.
- Made offline pre-order sync idempotent (request-hash conflict detection, safe edit replay), and built a retry-safe job that assigns promotions to new routes in one set-based SQL query.
- Built a distributor investment early-warning engine with exact BigInt money arithmetic, and a queue-based Excel import for a 7-level geo hierarchy with per-row transactions.

**Lead Developer** — Betteremart — Chittagong, Bangladesh · Nov 2024 – Dec 2025

- Led a team of 4 developers: owned system design, broke features into tasks and assigned them, and ran code reviews before every merge.
- Built the Better E Mart e-commerce platform for web and mobile with a modular, API-driven architecture covering catalogue, checkout, POS and analytics.
- Integrated payment-gateway, POS and analytics APIs, and set up CI/CD pipelines for automated deployment.

**Software Developer (Remote)** — SystemSage Solutions Sdn. Bhd. — Kuala Lumpur, Malaysia · Oct 2023 – Oct 2024

- Built IoT smart-farming systems with Node.js and Firebase, ingesting real-time sensor data through AWS IoT Core, with live monitoring dashboards.
- Implemented geofencing and crop-prediction analytics; co-authored the resulting research paper (GEn-CITy 2024).
- Deployed services on AWS and Azure with CI/CD.

**Earlier:** Data Science Intern, Gifted Capital (Sep 2022 – Apr 2023) · Application Developer Intern, Alva Productions (Sep – Dec 2021)

## PROJECTS

**KnowledgeBeez** — Full-stack EdTech platform, live with real enrollments: multi-currency course catalogue, SSLCommerz and Razorpay checkout, learner progress, quizzes, verifiable certificates and a role-based admin dashboard. *Next.js, Node.js, Express, PostgreSQL, Prisma.*

**Tomatungi Resort** — Full rebuild of a resort's booking platform, live with real guest bookings: online booking, SSLCommerz payments, guest accounts, bilingual interface and admin dashboard. *Next.js, Node.js, Express, PostgreSQL, Prisma.*

## SKILLS

**Backend:** TypeScript, Node.js, NestJS, Fastify, Express, REST APIs, BullMQ, RabbitMQ, Zod

**Data:** PostgreSQL (transactions, row and advisory locks, partial indexes, upserts), Drizzle ORM, Prisma, Redis, MongoDB, MeiliSearch

**Infra & integrations:** Docker, CI/CD (GitHub Actions), AWS, Cloudflare, Linux, Stripe, SSLCommerz, OpenAI API, S3

**Frontend:** React, Next.js, TanStack Query, Tailwind CSS, shadcn/ui

## EDUCATION & RESEARCH

**B.Sc. (Hons) Computer Science (Mobile Computing & Networking)** — UCSI University — Sep 2020 – Aug 2023

- Co-author, "An IoT-Based Smart Farming Solution for Sustainable Agriculture," accepted at GEn-CITy 2024, Malaysia.
- First author, book chapter on the Internet of Everything in business, *Digital Transformation: A Way Forward*.
